CUMULATIVE INDEXES

Cumulative indexes are available for *Physics Abstracts, Electrical & Electronics Abstracts* and *Computer & Control Abstracts,* for both authors and subjects. These cumulations generally cover a period of four years, with the exception of *Computer & Control Abstracts* where the initial volume covered the period 1966-68. The table below shows the prices and periods for the two types of cumulative index.

OTHER INSPEC SERVICES

SDI

(Selective Dissemination of Information.)
This is a service individually tailored to the requirements and interests of the engineer or research worker. Details of information relevant to the interest profile of the individual subscriber are selected from the data being processed for the INSPEC Database.

TOPICS

This is an SDI service based on standard profiles. There are over 80 subjects covering high-activity areas of research and development. This is an inexpensive service designed to alert engineers and researchers to the availability of literature within their subject area.

MAGNETIC TAPES

Tapes containing all the information included in the INSPEC publications are issued twice monthly. They enable the larger research and development organisations to produce their own internal information and current-awareness services.

PROPERTIES OF

Mercury Cadmium Telluride

This latest publication in the EMIS Datareviews series is the first authoritative work of reference on the properties of the Group II-VI ternary alloy Mercury Cadmium Telluride (HgCdTe). Current interest in this material centres on its unique infra-red detection properties and its resulting wide range of applications in the fields of meteorology, aerospace and defence.

To produce semiconductors to strict specifications, it is necessary to characterise them fully and consequently to have reliable materials data. This book will satisfy these requirements for MCT and so serve to advance research in the field.

Contents include:

- **Mechanical & Thermal Properties**
- **Diffusion**
- **Band Structure & Carrier Properties**
- **Segregation of Impurities**
- **Defect Etching**
- **Dielectric & Optical Properties**
- **Annealing & Doping**
- **Surfaces & Interfaces**
- **Precipitation**
- **Piezo-electric, Elasto- & Electro-Optic Properties**

Properties of Mercury Cadmium Telluride casebound 280 x 210mm is priced at £75 UK, $170 USA, and £95 elsewhere.
